(Although the following text presumably represents the first-hand observations of source, its tone nevertheless suggests that at least some of the facts may have been extracted from Soviet publications. There has been no opportunity to determine the text's basic origin.

25X1

1. Chainless oil drilling winches have been designed and produced by the Kuibishev Heavy Machine Building Plant in Irkutsk, in conjunction with experts of the Ministry of Eastern Oil Industry.
2. These winches, in which a Cardan shaft and gear box replace the chain drive, are more reliable in operation and eliminate interruptions caused by breakdowns of winch chain drives. As a result, they reportedly have considerably increased the speed of oil well drilling, and have proved highly efficient during operation in the Urals' Krasnokamsk oil fields.
